Lubricants and special products for heavy-duty commercial vehicles

oilproducts.eni.com

Eni has developed a complete range of lubricants which guarantee high efficiency, reliability and protection for heavy-duty Diesel commercial vehicles.

The **i-Sigma** engine lubricant line includes products employing reliable, tried-and-tested formulations as well as leading-edge technologies, suitable for modern engines such as those equipped with exhaust gas after-treatment systems.

In particular, a series of lubricants have been specially formulated to provide better **fuel economy**, **high protection** in any weather conditions, **respect for the environment** and **long-lasting performance**.

Eni also offers a series of specialized products as transmission oils, greases and coolants which are able to satisfy any additional application requirements.

Engine oils

The **i-Sigma** line of lubricants includes:

High performance engine oils designed to meet the highest quality level requested by international bodies (API and ACEA), and having a wide range of manufacturer approvals.

TOP MS - Oils with a low content of sulfated ash, phosphorus and sulfur (Mid SAPS), specifically formulated in order to maintain the efficiency of the modern exhaust gas after-treatment devices.

TOP - Oils with a high content of sulfated ash, phosphorus and sulfur (Full SAPS), specifically formulated for traditional vehicles fitted with less recent exhaust gas after-treatment devices.

High performance engine oils with a high content of sulfated ash, phosphorus and sulfur (Full SAPS). They have a good quality/price ratio.

PERFORMANCE - Oils designed to meet the international quality levels (API and ACEA) and having a wide range of manufacturer approvals.

High performance engine oils with a high content of sulfated ash, phosphorus and sulfur (Full SAPS) that guarantee the same quality standards in any application field.

UNIVERSAL - An ideal solution for the lubrication of mixed vehicle fleets comprising both heavy and light duty vehicles powered by gasoline and Diesel engines.

High performance lubricants with a **good resistance to oxidation**, **excellent detergent and dispersant properties** that allow the **maximum oil drain intervals** according to the manufacturers recommendations.

A high performance lubricant formulated with raw materials from renewable sources and re-refined oils, suitable for the lubrication of Diesel powered commercial vehicles.

It offers high anti-wear and detergent performance, which limit the formation of sludge deposits, and a high thermo-oxidative stability. It allows prolonged oil drain intervals, according to the indications of the vehicle manufacturers.

- Full SAPS
- High performance
- Extended oil drain intervals
- Bio-based components from renewable sources

Products for specific markets

Engine lubricants especially formulated to meet specific needs:

- vehicles requiring specific international and manufacturers performance levels
- high sulphur content fuels
- demanding weather conditions

NOT EVERYONE KNOWS THAT

ACEA is the European Automobile Manufacturers' Association.

It defines through laboratory and engine tests the minimum quality levels (specifications) that lubricants must meet to be used in engines. These specifications are reported in the vehicle use and maintenance manuals as a reference for the choice of the lubricant, and are shown on the labels of lubricants to indicate their level of performance. ACEA performance levels for heavy duty Diesel vehicles are identified with the letter "E" and are four: E4, E6, E7, E9.

The image below shows the main differences between these specifications:

	Full SAPS	Mid SAPS
Extended oil drain interval	E4	E6
Mid oil drain interval	E7	E9

However, this table provides only a general overview, and it is necessary to refer to the vehicle maintenance manual, considering load, road and climatic conditions.

WHAT DIFFERENCE IS THERE BETWEEN FULLY SYNTHETIC, SEMI-SYNTHETIC, TOP SYNTHETIC LUBRICANTS, ETC.?

These claims reflect marketing issues rather than a technical content, and are not attributed on the basis of a universally recognized standard. Each manufacturer adopts its own criterion, so the comparison between different products and assessment of suitability for use must be based on the viscosity grade and the performance specifications.

WHAT DOES SAPS MEAN?

SAPS stands for Sulphated Ash, Phosphorus and Sulphur.

WHY HAVE MID SAPS LUBRICANTS BEEN DEVELOPED?

The entry into force of progressively more stringent emission standards has obliged the engine manufacturers to adopt sophisticated exhaust gas after-treatment systems. These systems are sensitive also to the composition of the lubricant that passes in the combustion chamber, as it can give rise to undesirable phenomena such as filter clogging or interference in the process of catalytic conversion of contaminants. The consequences are a loss of engine power with an increase of fuel consumption, or an increase of emission of pollutants from the exhaust pipe. Mid SAPS lubricants are specifically formulated to reduce the negative impact of the lubricant on these systems, guaranteeing their maximum performance.

IS IT POSSIBLE TO ADVISE A FULL SAPS PRODUCT WHERE A MID SAPS PRODUCT IS REQUIRED?

No, because a lubricant with a high SAPS content might damage a modern exhaust gas after-treatment system.

HOW OFTEN SHOULD YOU CHANGE THE ENGINE OIL?

Oil change interval depends on lubricant, performance specifications and operating conditions. It is therefore good practice to follow the use and maintenance vehicle manual or the indications of the on-board system.

HOW SHOULD YOU CHOOSE THE RIGHT LUBRICANT FOR YOUR VEHICLE?

Consult the Lubefinder tool on the OilProducts website and available at following link: <http://eni-ita.lubricantadvisor.com>

WHAT IS THE IMPORTANCE OF THE BASE NUMBER (BN)?

The Base Number is one of the most important parameters to evaluate the quality of a lubricant, especially in the long term. It measures the capacity of a lubricant to neutralize the acids that are produced during the combustion process, or arising from the high temperature oxidation of the lubricant itself. These phenomena are more relevant in those countries where motor fuels have a high sulfur content. In these cases, Eni offers lubricants with high BN, named Eni i-Sigma performance HBN and Eni i-Sigma monograde HBN.

WHY IN GAS FUELED VEHICLES IT IS RECOMMENDED THE USE OF LOW ASH PRODUCTS (MID SAPS)?

An engine fueled by compressed or liquefied natural gas may show a problem of pre-ignition, due to the formation in the combustion chamber of metallic deposits resulting from lubricant additives. Mid SAPS lubricants are able to prevent this phenomenon.

The Eni engine oils range is completed by other products formulated to satisfy the different application needs, in order to obtain the best performances even in severe operating conditions.

GREASES

Eni offers a wide range of greases meeting all application needs.
Greases for special applications at extremely low temperatures and heavy loads are also available.

Eni Grease 15

NLGI: 1
Thickener: Calcium Anhydrous
Colour: Green

ISO 12924 L-XBBGA 1
DIN 51825 K 1G -20
ASTM D 4950 LA

High adhesiveness and resistance to vibrations.

Thanks to its water repellent and anti-wear properties it is suitable for use in wet environments and in contact with water.

Ideal for the lubrication of vehicle chassis.

Eni Grease 16

NLGI: 2
Thickener: Calcium Anhydrous
Colour: Green

ISO 12924 L-XBBGA 2
DIN 51825 K 2G -20
ASTM D 4950 LA

High adhesiveness and resistance to vibrations.

Thanks to its water repellent and anti-wear properties it is suitable for use in wet environments and in contact with water.

Ideal for the lubrication of vehicle chassis.

Eni Grease 30

NLGI: 2
Thickener: Lithium
Colour: Yellow Brown

ASTM D 4950 GB
ISO 12924 L-XBCHA 2
DIN 51825 K 2K -20
MB-APPROVAL 267.0

'Multi-purpose' grease for bearings, wheel hubs, water pump, dynamo, starter motor, chassis, etc.

High dropping point useful for parts exposed to high temperatures.

Strong mechanical and chemical stability even after intense and prolonged mechanical stresses.

Thanks to its water repellent and anti-wear properties it is suitable for use in wet environments and in contact with water.

Eni MP grease

NLGI: 2
Thickener: Lithium
Colour: Dark Brown

ASTM D 4950 LB
ASTM D 4950 GB
ISO 12924 L-XBCHB 2
DIN 51825 KP 2K -20

Contains E.P. additives (Extreme Pressure).

Available in cartridges packages. It is suitable for use in a wide range of industrial and automotive applications.

AdBlue®

AdBlue® is an aqueous solution of urea (32,5% on average) that is used to reduce the level of NOx tailpipe emissions in Diesel engines equipped with SCR (Selective Catalytic Reduction) technology, employed by the major European truck makers.

It is a transparent, odorless liquid whose characteristics are regulated at European level by the ISO 22241 standard.

AdBlue® is not a fuel, as it is not injected into the combustion chamber, and is therefore not subject to excise tax or other duties.

It is not classified as harmful to human health or the environment.

It is not flammable or explosive.

The AdBlue® trademark is owned by the German Association of the Automotive Industry (VDA) which guarantees that the quality standards are maintained in accordance with the specifications of ISO 22241. Check that the product you buy for your vehicles has the AdBlue® registered trademark on the label. If you buy AdBlue® at Eni service stations, you can be sure you have purchased **synthetic quality AdBlue®** that is fully compliant with the specifications established for its use with SCR technology.

The use of AdBlue® ensures that exhaust NOx emissions remain below the limits established by law.

The presence of AdBlue® at our service stations demonstrates our commitment to improving the quality of the services and products offered, to meet the needs of all engines and all vehicles while respecting environmental issues.

RESEARCH CENTRE

The **Eni Research Centre in San Donato Milanese** has state-of-the-art laboratories featuring advanced equipment for studying, developing and fully identifying the characteristics of raw materials for high performance lubricants.

In line with the company's marketing strategies, the Eni research involves performing important technical activities in collaboration with important machinery manufacturers, regulatory authorities and several prestigious Italian universities.

The Eni Research Centre complies with the UNI EN ISO 9001 standard in relation to the activities of "Applied research, technical support and laboratory analyses in the energy sector: lubricants, additives, bitumens, special products for motor vehicles and for industrial use" and "Production on pilot systems of lubricants, propellants and fuels" (sector EA 34,35 - certificate no. 676).

QUALITY

The long time established Eni Refining & Marketing Quality Management System obtained the updated UNI EN ISO 9001:2015 certification about commercial and industrial processes covering the whole lubricant and additives industrial cycle and including project design, process development, supplying activities, production operation, blending, packaging and client delivery.

OUR COMMITMENT TO ENSURE CUSTOMER SATISFACTION

The Eni Refining & Marketing organization is able to support customers for any need regarding lubrication oils and to consolidate a strong relationship based on integrated technical support services.

SALES ASSISTANCE

The Eni sales network, present on the territory, provides information on the range of lubricating oils and assists customers in all the product procurement phases.

TECHNICAL ASSISTANCE

Eni technicians are available to help solving any operative issue and can provide their assistance to arrange lubrication guides, to follow the oil charge monitoring and to offer training courses regarding lubrication.

LABORATORY ASSISTANCE

The Eni laboratories give their full assistance to customers for the oil charge control by periodic monitoring in order to guarantee the best operating efficiency of lubricated machineries.
